Similarity Breeds Trust: Political Homophily and CEO-Board Communication

(with Sudipto Dasgupta, Tao Shu, and Xiao Ren)

- Abstract: Communication between a CEO and the board is crucial for the board to function effectively in its advisory role. However, the theory of “friendly boards” argues that the CEO’s willingness to communicate may be adversely affected out of concern that a well-informed board would monitor too intensively. We suggest, and provide evidence, that similarity of political views between the CEO and independent directors can encourage the CEO to share adverse information in a timely manner with the board. This *ex ante* incentive to communicate adverse information exists only if strong shareholder governance prevents the board from insulating a CEO with similar political views in the case of *ex post* bad outcomes.

Relative Performance Evaluation and Strategic Competition

(with Li He and Toni M. Whited)

- Abstract: We examine how relative performance evaluation (RPE) affects industry competition—a question relevant for corporate boards interested in incentivizing executives. Using U.S. airline data, we estimate a dynamic game of competition with heterogeneous firms in an oligopolistic market with RPE contracts. RPE naturally makes CEO compensation less sensitive to market demand. However, because RPE amplifies a firm’s cost efficiency relative to its peers, RPE does not always induce aggressive product market competition, often weakening competition from inefficient firms. While RPE induces endogenous selection of efficient firms into large, high entry-cost markets, and vice versa, RPE has little effect in uncompetitive markets.
